

YASH Blueprint Agent

From Hidden Logic to Business Clarity

The Invisible Risk

What you don't know is costing you.

**What
You See**
app screen,
reports and
transactions

**Where the real
problem is:**

**Limited Business
Process Visibility**

Unseen Business Rules
and embedded logic

Hidden Risks and Technical Debt,
dead code and dependencies

1. Onboarding paralysis

New engineers spend months reverse-engineering what few long-tenured developers hold only in memory.

2. Modernization stalls

Cloud and migration projects stall because no one can map all the hidden dependencies.

3. Attrition risk

Every developer who leaves takes undocumented system knowledge with them.

4. Compliance exposure

Audits demand current documentation and business-rule traceability that, in most systems, simply doesn't exist.

The problem is not that teams don't document. It's that manual documentation can never keep pace.

How YASH Fixes It

YASH Blueprint Agent reveals intelligence across all four layers of system.

Most tools stop at Layer 2. YASH Blueprint Agent reaches Layer 4.

FOUNDATION

1. Technology Layer

You receive a complete map of what your system is built on.

Business Processes | Business Rules | Data & Dependencies | Risk & Technical Debt

STRUCTURE

2. Architecture Layer

You receive a blueprint of how the system is organized.

Architecture Diagrams | Module & Package Mapping | Module Block Diagram

PROCESS INTELLIGENCE

3. Execution Layer

You receive a step-by-step flow of how the system runs.

Application Flow Diagrams | User Journey Maps | Database Schema

DIFFERENTIATOR

4. Business Intelligence Layer

You receive the business logic no other tool surfaces.

Business Rules Registry | Use Case Documentation | Embedded Decision Logic

The YASH Difference

- **Layer 4 Business Intelligence**
no other tool offers
- **Business rules registry**
derived from code, not interviews
- **Pre-modernization foundation layer**
- **Runs inside your environment**
- **GitHub Copilot integration**
Extracted intelligence feeds Copilot context, giving developers smarter suggestions

Capability	YASH	Others
All 4 intelligence layers, one engagement	✓	⚠
Use case docs with named actors	✓	✗
User journey mapping	✓	✗
Integration dependencies	✓	⚠
Flow and architecture diagrams	✓	✓
Code documentation generation	✓	✓

✓ Full capability

✗ Not available

⚠ Partial / migration-mode only

Complete System
Understanding

Modernization-
Ready Foundation

Reduced Risk of
Transformation

Faster, Better-
Informed Decisions

Audit-ready
Documentation
