EVERYTHING AT A GLANCE

BASIS

Microsoft Dynamics 365 Business Central

COMPANY SIZE

Small and medium-sized companies

INDUSTRIES

Chemicals, pharmaceuticals, biotechnology, cosmetics, food, medical technology

ELECTRONIC SIGNATURE

An electronic signature can be made mandatory in many areas of the application, in particular, to protect (GMP) critical changes and activities.

AUDIT TRAIL

The Audit Trail enables the logging and tracking of all data changes with user data and timestamps.

USER-SPECIFIC PERMISSIONS

Ability to define user specific permissions to edit specific fields. Processing can also be made dependent on certain field values.

HOW DOES THIS WORK EXACTLY? THE FEATURES

Audit Trail

The audit trail enables tracking of all changes in the database. While the audit trail cannot eliminate the risk of data being entered or changed incorrectly, it does allow for detailed analysis should an error occur.

In addition, the requirement to assign a reason for the change can be set up.

All logged changes are marked with user data and time stamp (date, time) and the affected table field is identified. Similarly, the system logs the type of change (insert, modify, delete) and the original and new value.

Field Safety

User-dependent rights to edit specific fields can be defined. Processing can also be made dependent on certain field values.

Electronic Signatures

An electronic signature is data that uniquely identifies the signatory. The signatory provides their signature for specific data changes. This securely associates the user with the changes made.

An electronic signature can be made mandatory in many areas of the application, in particular, to protect (GMP) critical changes and activities. In addition, policies can be set on how a password is assigned (e.g., the number of special characters included) or its validity period.

Label Balancing

The logging of printed labels and data forms the basis for label balancing. Label usage can also be logged.

THE YAVEON PROBATCH 365 BASE APP

That all sounds excellent.

But wasn't there something about a surprise?

That's right, the **YAVEON Base app:**

It is more than a base. It is your foundation.

Set up traffic light rules for tables

Red, yellow, green - we all know the traffic light principle. In the Base app, the colors make your life easier by acting as a visual reinforcement.

Define traffic light rules that change the colors based on values. For example, you can specify that fully delivered sales orders are indicated in green, while undelivered orders are indicated in red. Select the rules in the list view to highlight records.

You can set up the traffic light rules for the following tables:

- Items
- Vendors
- Customers
- Inventory Summary
- Purchase Lines
- Sales Lines

Set up extended texts

Whether for master data or purchase and sales documents: Define extended texts for accounts payable, customers, G/L accounts, items, and resources. You want an automatic transfer to purchase and sales documents? No problem. Discover even more benefits by using extended texts in other YAVEON apps, for example, Research and Development, Warehouse Management, Sales & Purchase, and Quality Assurance.

Set up master data features

Assign features with a specific value to an item. You can also set up features whose value is calculated via a formula based on the values of other features.

Do you want to search for items with specific features? Just use the feature search. You can filter an item list so that only the items that match the criterion are displayed.

For even more benefits, combine the function with other YAVEON apps, for example, Quality Assurance and Manufacturing.

THE YAVEON PROBATCH 365 BASE APP

Set up a corporate design for your documents

Choose the layout that suits your company best and use it for diverse purchase, sales, and stock transfer documents.

Do you need the edited document in another language? No problem. Simply choose from the languages assigned to the labels for fields and columns and add document and field names. With one click, the finished document is ready.

To add information, choose which columns and fields to print on the document.

If you don't like the order of the columns, just change them according to your preference.

For even more benefits, extend the function for other YAVEON apps, for example, Trade, Hazardous Substances Management, Warehouse Management, Manufacturing, and Lot Management.

Get an overview with the inventory summary

With the Inventory Summary, you always have an overview of the current inventory - sorted by item, batch, location, and storage space.

Would you like an up-to-date status report of your inventory? You've got it - because all of the information about your inventory is in one place and is automatically updated with every posting. It is your information center for warehouse managers, clerks, and production planners.

For even more benefits, add columns for other YAVEON apps, for example, Lot Management, Warehouse Management, Manufacturing, and Hazardous Substances Management.

Extend the authorization management of Microsoft Dynamics 365 Business Central

Do you want to combine permission sets in the system and even be able to exclude certain rights? With Permission Set Management, this is possible.
