Services

YouCC provides a range of services and solutions based on our highly trained cloud and security specialists together with cooperation with leading worldwide companies.

YouCC a Microsoft cloud Gold Partner will work with your company by consulting and building a full program that will assist your company move safely and securely to the cloud.

YouCC Technologies with its vast experience in consulting to companies that are moving to the cloud will build a detailed plan for your company how to make a transparent technical and secure cloud migration.

YouCC areas of expertise are:

- Microsoft Clouds
- Security
- Digital Transformation
- Business Continuity
- Cloud Architecture.
- Cloud Migration
- Cyber Security
- Maintenance

Zero Trust Cloud Cyber Security

As organizations continue to migrate to the cloud it is imperative that everyone understand how to provide modern security against constantly evolving threats. Data stored in the cloud has become one of the most important assets of an organization and protecting it is key. Malicious threats can come from many different sources and having a holistic approach will increase your overall security posture.

In the past, as an organization, you may have focused your defenses on protecting network access with on-premises firewalls and VPNs, assuming that everything inside the network was safe. But today, as data footprints have expanded to sit off-premises in the Cloud, or across hybrid networks, the Zero Trust security model has evolved to address a more holistic set of attack vectors.

Both Microsoft 365 and Azure are designed with Zero Trust as a core architectural principle. Protections span beyond the Microsoft cloud, to hybrid or even multi-cloud environments. Fundamental to Microsoft's approach for Zero Trust is not to disrupt end users but work behind the scenes to keep users secure and in their flow as they work.

The key here is end-to-end visibility and then bringing all this together with threat intelligence, risk detection and conditional access policies to reason over access requests and automate response across all of the Zero Trust layers of defense.

Securing organization cloud assets is a journey. Microsoft 365 security stack is a set of tools that provide a holistic approach for addressing Zero trust environment.

YouCC Technologies as experienced Microsoft GOLD Partner will provide you with end-to-end consultant and deployment program to fit your organization needs for proper and complete protection.

Secure the future: Four key areas of intelligent security

Identify and repel more threats than ever before with Microsoft Advanced Threat Protection, Azure Security, and Azure Sentinel.

Secure the front door

Protection from identity-driven breaches, email attachments, and attacks targeting the OS

Secure content

Protect content at the time of creation, in transit, and during consumption

Secure devices

Protect against workplace issues or unsecured BYOD devices

Great employee experience

Maintain strong productivity without compromising security

Between our customers
