# ZEN3

Azure Datamime Services exponentially speeds up your data collection, annotation & validation.

Azure DataMime services are an annotation and workflow Process designed to build large-scale training data sets for machine learning and AI projects. Datamime collects and tracks data across various media types such as text, speech, image and video. With support in over 20 languages, Datamime also simulates and determines locale-specific conversations.

Why customers use Datamime Services

- Native language annotators
- Annotation Interface
- Create managed resource pools
- Accurate and high-quality data
- Compliant to Industry standards: HIIPA, PCI, FEDRAMP, CJIS, GDPR, etc.

Performance & Quality

- Custom workflows that integrate with your existing workflows.
- Able to work across multiple media types.
- Dashboard for easy data review.
- Strong data privacy and compliance

2K+ hours of speech data collected and transcribed

Improvement & Process

- Exponentially speeds up data collection, annotation and validation
- APIs to connect your inhouse tools
- Platform and device type agnostic

1300+ annotation experts on team

Resources

- Leverage annotation experts
- Collection options are available
- Designing services available
- Annotation training available
- Train the Trainer offered
- Simplify annotation needs

1M+ tasks annotated to date

Zen3 Services are powered by our exceptional team of linguists, annotators, computer vision experts, and quality analysts. We also have our proprietary automated speech recognition and NLP engine for multiple languages and accents.
