 - Zensar End-to-End Monitoring services
- Optional bundling of offers
 - Collaboration using M365
 - Process Automation
 - Cybersecurity for hosted VDIs

As the Covid-19 pandemic follows through its course forcing communities to a complete lockdown, it is of paramount importance that organizations across any vertical and scale take measures to safeguard their workforce, while ensuring consistency in operations and delivering superior user experience.

To realize this quintessential objective amid these challenging times, all enterprises need to enable employees to work remotely. Unfortunately, not all organizations are equipped to adapt to this sudden surge in remote workforce.

This is where Zensar empathizes with its valued customers. Through our ZenCare offering, we enable customers to ramp up their remote workforce instantly and securely on Azure at any scale, anywhere and against all odds.

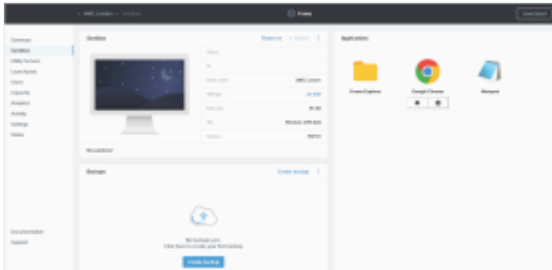

The ZenCare solution leverages the SaaS based Frame VDI control plane. The actual user VDI in the "data plane" deployed on Azure or on-premises as shown in the adjoining diagram. This delivers the ultimate freedom of choice for businesses enabling them to opportunistically harness the power of Azure Public Cloud or Edge data centers and align with the "Hybrid- Cloud" strategy across the digital ecosystem.

ZenCare creates a Secure Azure Cloud environment built on cybersecurity best practices for Firewall, IPS, AntiBot, Antivirus, Threat Prevention, VPN, DLP, URL filter, Zero-Day Protection, DDoS protection, Data encryption among other enterprise grade customizable and vertical centric security features.

With ZenCare, we can setup up to 1000 VDIs within 72 hours (for critical situations) inclusive of minimally configured Golden Image, AD integration, VPN configuration and bundled with 24x7x365 service desk support.
