

COMPLIANCE OPERATING SYSTEM

Turn compliance into a governed operating system.

ZestComply is the operating layer for the compliance work auditors actually inspect. It manages your industry frameworks, generates policies, maps controls, and produces defensible evidence — connecting every requirement to a decision your leadership can stand behind.

PLATFORM CAPABILITIES

Policy Generation

Generates policies, procedures, and control mappings directly from framework requirements.

Traceability

Connects every control back to its source, so nothing is unexplained at audit time.

Executive Reporting

Turns compliance posture into clear, board-ready reporting for leadership decisions.

Framework Intelligence

Maintains up-to-date coverage across the frameworks your business is measured against.

Human Validation

Keeps a human in the loop — evidence is reviewed and approved, never rubber-stamped.

Continuous Monitoring

Tracks control status, surfaces gaps, and flags what needs attention before an auditor does.

Microsoft Teams Alerts

Sends evidence, coverage, and approval alerts straight to your organization's own Microsoft Teams channel in real time.
