## Multi-Channel Selling

- Sell your products across multiple channels, including online marketplaces and social media platforms

## Mobile Access

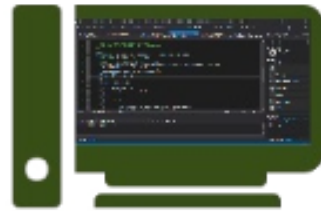

- Access your ERP system on the go through mobile devices for greater flexibility and convenience

# Why SAAS is the BEST!

## Software as a Service

SaaS systems are most efficient provided their features are configurable, and can solve concerns of different schools as per their need. Save development time as well since you get a ready-to-use product. Most good SaaS providers keeps on adding more features continuously.

## In House Development

The task of building a comprehensive application suiting maximum needs for a school is not an extremely easy one. Why? Apart from project management complications, the financials involved are extremely huge.

## Buy & Host

Another viable option looks like purchasing an already existing school management system along with source code, and build further on that for the extra features needed. The financials involved in this are as large as the risk of getting a poor quality code.

## Amazon Web Services

World's Best Server  
No downtime  
Work from anywhere, anytime

## Best User Interface

Best Intuitive Interface  
Easiest school management system to use

## One Point Solution

A single software for everything  
Stop spending money on multiple software for different operations

## Promotes Best Practices

Promotes what is best  
i.e. Technology Oriented Culture and Digital learning practices

## Process Oriented

Increases Accountability  
Process oriented system confirms everybody is playing his part honestly

Fast

Secure

Authorized Access

No Additional Costs

No Downtime
