

Unified Information Management

Govern all data across the enterprise

ZL Technologies enables organizations to illuminate their data and manage tens of billions of emails, files and data items using a single platform.

Organizations are now tasked with managing enterprise data for eDiscovery, records management, regulatory compliance, and privacy. However, much of this data lies in unmanaged silos. ZL's unified solution brings together documents from sources such as email, file shares, SharePoint, social media and IM for comprehensive information management.

Why organizations choose ZL

- Satisfies all governance functions simultaneously
- Handles all types of data, including unstructured and structured
- Scales to tens of billions of data items with no loss in performance
- Manages data in-place (no copy) or via archive (copy)
- Consolidates all management on one single platform/console
- Proven 20-year track record of managing very large data sets for Global 500

Enterprise Search

Industry's most powerful search executes searches in parallel across all data silos in seconds.

Full Insight

New BigDB™ technology provides near real-time analytics and visualization at speeds up to two orders of magnitude faster.

Complete Governance

Data management platform is unique in satisfying mandatory governance requirements on all data across the enterprise.

“This has been one of the best third-party software implementations that my colleagues and I have completed in over 25 years of software implementations.”

– Senior Business Analyst, Top Financial Services Company

A Better Way to Manage Data with

ZL Technologies and Microsoft Azure have partnered to offer complete information management in a reliable and scalable infrastructure.

Scalable

ZL + Azure combine to offer a massively scalable solution to today's growing data volumes. Built to handle tens of billions of data items across the full spectrum of enterprise data repositories.

Versatile

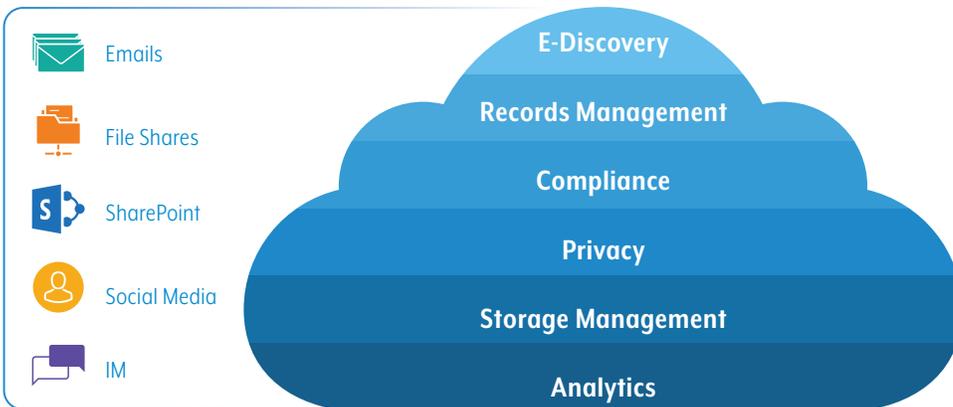

With a full spectrum of deployment modes and over 50 worldwide data centers, ZL + Azure offer the flexibility that is often critical to compliance with new privacy regulations.

Cost Efficient

ZL + Azure employ an advanced computing and storage architecture, which scales elastically while reducing costs by leveraging pay-for-use in granular fashion.
