Azure Foundation Assessment

The Azure Foundation Assessment helps customers plan their move to the cloud with confidence.

Microsoft provides a broad datacenter analysis identifying and prioritizing Azure migration candidates complete with cloud consumption cost estimates and a CAF Strategy and Planning workshop.

With real-time performance data, customers receive prioritization of Azure-ready migration candidates and cost consumption and storage estimates.

A closer look at what the Azure Foundations Assessment provides:

INFRASTRUCTURE MODERNIZATION
Capture key foundational elements to support datacenter improvement to help customers reduce cost, improve service levels and drive business agility.

MICROSOFT AZURE AND CLOUD PROFILING
Provide real-time data on server and application performance to support a more detailed cloud strategy discussion.

RECOMMENDATIONS AND NEXT STEPS
Facilitate future planning with detailed compute and storage reporting, virtualization architecture, and support timelines to orchestrate end-of-life transitions and product innovation.

What's included

- ⊘ Executive summary of data-driven findings
- ⊘ Identification and prioritization of candidates to move to Azure
- ⊘ Consumption and storage cost estimates
- ⊘ CAF Strategy and Planning workshop
