

Azure Landing Zone Design and Implement

Azure Cloud Adoption Framework Landing Zone, also known as Governance Implementation, is a basis for all Azure operations.

*A minimal Landing Zone should take care of azure governance aspects such as **role assignments, allowed locations, resource groups, required tags, allowed resource types and SKU's and initial shared services**. Additionally, a further refined landing zone may include aspects of Networking, Migration Resource groups, Security center and more.*

Depending on the needs and requirements, the Landing Zone blueprints can be assigned to a subscription or management group levels. Therefore, the end result for a landing zone could be multiple blueprints assigned to different levels and contain multiple artifacts and several templates.

Zure offering creates the initial blueprint at a subscription level with essential items and provides an excellent starting point for further landing zone improvements.

THE PROJECT

- Two to three workshops to gather the requirements and values for initial Landing zone blueprint
- Zure creates an initial Azure Blueprint based the information gathered in the workshops
- Workshop to deploy the initial landing zone with your personnel

THE PURPOSE

- Make Azure deployment and management easy and secure by
- Creating and deploying the first and initial version of the landing zone
 - Gain understanding and hands-on experience of the Azure governance and blueprints
