

Azure Adoption Assessment

Do you have existing infrastructure, applications and services running in Azure and are unsure if these services are configured according to best practices? Is your governance, application landscape and cloud infrastructure future-proof and are the correct architectural patterns being applied?

During this assessment two Zure Architects will assess and inspect your existing Azure environment and deployments on three different areas: Azure Environment, Application & Architecture and Operations & Governance

We build upon existing and official best practices of Microsoft and lessons learned from building Azure solutions since 2011.

THE WORKSHOP

- During a kick-off meeting we build up a mutual understanding of the business requirements and the Azure ecosystem to fully understand your requirements
- The assessment will validate your current Azure environment and identify potential risks and best practices for
 - Your actual cloud services setup and configuration
 - Security and cost management
 - Flexibility of your architecture and applications
 - Approach for monitoring and operations
- Based on the existing ecosystem and landscape additional workshops will be organized to cover each area of the assessment
 - Azure Environment
 - Application Portfolio
 - Operations and governance
- The deliverable is an assessment document containing the findings of the assessment with actionable recommendations on how to mitigate certain findings
- The outcome will be discussed during a wrap-up meeting

THE PURPOSE

- Assess your current Production infrastructure, applications and services
- To understand if the different Azure services are used according to best practices
- To understand if correct architecture patterns are being applied
- Make sure that the Azure usage is cost-efficient
- Make sure that a good baseline is in place for both the Azure services and the application in order to be ready for future development.

NEXT STEPS

- Finalize the design for your Application in Azure with Zure's "App Modernization Design"
- Create or update a comprehensive cloud governance for your organization with Zure's "Azure Governance"
- Create and deploy the optimal DevOps practices for your organization with Zure's "Well-Managed Azure DevOps"
