# Municipal collaboration platform for citizens health

We are in a global health care crisis, with ageing population and increase in chronic diseases.
Municipal primary health handles 90% of the volume but lack personnel and resources to cope.
There are significant municipal savings in enabling the citizen to be *proactive* in its health.
As a citizen, you will need to *own the storyline to your health* – but you do not have the tools!
HealthB is how to do it.

Municipality & Citizen's collaboration tool – for health information & treatment plans

Citizen **collects** their health information	Citizen **shares** to the health care provider	Health care provider **sends** advice / treatment plan in return

Municipal health care director says:

" Subscribing to HealthB for our health care professionals **saves 10 minutes** per consultation, reducing our health care costs.
We can do **safer remote follow-ups** based on a common digital view, increasing our capacity to **see more patients**, hence our revenue.
Health info stays with the Citizen, no longer locked in our system silos..
Employees work smarter, **securing our reputation** and reducing risk.
